

Grease Thief

A Naturally Better Tile and Grout Cleaner

Product Information

GREASE THIEF has enzyme-based properties to penetrate and clean floor tile and grout especially in commercial kitchens where appearance and safety are a concern. Grease Thief is CFIA approved and BC Kosher certified.

GREASE THIEF as its name implies will steal oil and grease from your floor by using its dual cleaning actions to penetrate and suspend while not allowing re-depositing on the floor.

GREASE THIEF, with repeated regular cleaning, will bring most floors back to their original appearance. The environmentally responsible formulation helps to provide added safety to users and materials as well.

GREASE THIEF should have a one-week shock period for highly soiled or abused floors:

Dilute at 1:16 (64 ml/L)(8 oz/gal) with hot tap water (below 60°C).

Sweep floor first and spread generously, let stand for 5-30 minutes and pick up excess with a wet vacuum or mop.

Scrub grout in highly soiled areas prior to removing excess liquid. Do not rinse unless repeating the application. Repeat procedure for 7 days.

GREASE THIEF is very economical in use on a daily basis.

Dilute 1:100 (10 ml/L)(1.5 oz/gal) with hot tap water (below 60°C).

Wet mop as usual. Do not rinse.

You will notice a reduction in grout discoloration and nauseous floor odors in many instances.

GREASE THIEF is available in 2x2.6 gal (2x10L) TWIN PAKS and 4x1 gal (4x3.78L) cases.
